

Summary

The aim of this workshop is twofold: first, we are interested in discussing comparison as a methodology integral to developing a transregional approach to philosophy in the Middle East and South Asia. Second, we put a thematic focus on time and temporality. This focus is not coincidental because not only are time and its manifold conceptualisations relevant as an object of comparison but they also play a constitutive role in setting up the coordinates of comparisons. Reflecting upon comparison through notions of time is therefore, on the one hand, a useful way to politicise and mark comparison as a particular practice. On the other hand, discussions of time and temporality might help to envision different practices of comparison that enable an alternative transregional perspective while avoiding Eurocentric frames of comparison.
